There	are	two	wavs	to	do	this:
111010	aic	LVV	ways	w	uu	นาเจ.

- 1: if you don't change any line, you can Undo and Redo to switch back and forth between the translation and the original text.
- 2. Or you can save the translated text with a new new (preferably in the same location and with a new intermediate suffix like: "Christmas 2007.fr.srt") and re-open the original again (found in the "Open recent" Menu-Item in the "File" Menu). You have now 2 windows open concurrently to compare the old and the new text with the possibility to manually improve the rough translated text.
