

In release 1.3 for the loading and playing of the accompanying movies there are a few rules:

- the movie has to be in the same folder as the subtitle
- only AVI, MKV, FLV, MOV and M4V movies are searched for
- the name (without above mentioned suffix) has to be exactly the same. So "Paris in 2006.avi" will not comply to "Paris In 2006.srt"
- it's assumed that an intermediate language acronym can precede the .srt suffix. So in principle a subtitle named "Paris in 2006.fr.srt" will lead to a movie called 'Paris in 2006.fr.mkv" but also to "Paris in 2006.mkv". The first one has priority.
