

SubtitleReSync uses Apple's Quicktime technology and assumes you have Perian installed. However, with this combination SRS can only play a movie with subtitles when they are AVI, MKV or FLV (currently). MOV and M4V are found and played but without a running subtitle on screen. You can check the "Walk" box to have SRS walk together through the subtitles when playing the movie.

Note: On mavericks Perian will not work anymore because Apple stopped supporting the "old" Quicktime technology. We suggest you use another viewer like VLC.
